OVERVIEW AND MODULE 1 AT A GLANCE

The Urban Ecology Curriculum for English Learners is an interdisciplinary, standards-based, upper elementary/middle school curriculum designed to bolster English language and literacy learning for Long Term English Learners (LTELs)¹, or students “at risk” of becoming LTELs, by providing access to rigorous, STEM content. The curriculum emphasizes locally-relevant field studies focused on engaging students in scientific study through the “four ways of knowing science”: understanding science, talking science, doing science, and acting on science. English language skills and abilities are developed using a project-based learning approach that establishes content and inquiry as a vehicle for language and literacy development, with an emphasis on expository/informational writing and oral language development.

Urban ecology is a new branch of environmental science that seeks to understand the natural systems of urban areas and the threats that face them. Urban ecologists study the trees, rivers, wildlife and open spaces found in cities to understand the extent of those resources and the pressures they face from human development. Urban ecology is the study of cities as the interactions among biological, chemical, physical and human social forces.

The Urban Ecology Curriculum for English Learners is comprised of several modules, organized conceptually. These modules may be used sequentially or they may be used in any order. However, it should be noted that Module 1 provides foundational knowledge and experiences for students, as well as a through description of urban ecology as a science. All subsequent modules are explorations of the scientific method that deepen scientific knowledge and principles related to Urban Ecology. All modules are based on the Urban Ecolab Curriculum which includes a total of eight modules, and can be accessed at the following website: cures.lmu.edu/for-instructors/urban-ecolab-curriculum. The table below offers an overview of the three Urban Ecology for English Learners Modules adapted for grades four thru eight.

### URBAN ECOLOGY FOR ENGLISH LEARNERS MODULE DEVELOPMENT

<table>
<thead>
<tr>
<th>ORIGINAL URBAN ECO LAB MODULE</th>
<th>URBAN ECOLOGY FOR ENGLISH LEARNERS MODULE</th>
<th>BIG IDEA</th>
<th>ACTION-ORIENTED PROJECTS</th>
</tr>
</thead>
</table>
Literacy Product: Communicate in a Public Service Announcement |
| Module 2: Patterns of Urban Land Use | Module 2: Patterns of Urban Land Use | Humans create and transform neighborhoods that can be studied as a system. | Science Product: 3D Neighborhood Land Use Map at present or over time and with or without the use of technology  
Literacy Product: Proposal for land use development in school or home community |
| Module 6: Biodiversity | Module 3: Biodiversity | Healthy urban communities have diverse natural systems. | Science Product: Field Data Collection to determine levels of biodiversity in community habitats  
Literacy Product: Biodiversity Science Report |

¹ In California, Long-Term English Learners are defined as ELs in grades 6-12 who have (a) 6+ years of continuous enrollment in US schools; (b) remained at the same EL proficiency level for 2+ years; and (c) are not making normative progress on academic achievement tests. Students “at risk” of becoming LTELs are in upper elementary school and have (a) been enrolled in US schools since grade 1; (b) remained at the Intermediate (Expanding) level of English proficiency; and (c) are not making normative progress on academic achievement tests.
MODULE 1

Purpose: This module introduces the overarching concepts, content, and frameworks which provide the foundation for the curriculum.

Note: It is recommended that you cover the content in this Module prior to moving on to other modules in the Urban Ecology Curriculum for English Learners.

BIG IDEA:
Cities are urban ecosystems.

UNIT 1: Cities as Systems
Lesson 1 - Pre-Assessment & Defining Urban Ecology
Lesson 2 - What makes a city?
Lesson 3 - Interrelatedness: Building Neighborhoods and Cities
Lesson 4 - Cities as Urban Ecosystems

UNIT 2: Ecosystem Structure
Lesson 1 - Ecosystem Structure Categories
Lesson 2 - Field Experience
Lesson 3 - Informational Text Reading: Part I - What is an Ecosystem? Part II - Ecology of Hummingbirds
Lesson 4 - Project Development Time

UNIT 3: Site Evaluation
Lesson 1 - Understanding Scientific Inquiry
Lesson 2 - Site Evaluation
Lesson 3 - Informational Text Reading: What is Urban Ecology?
Lesson 4 - Project Development Time

UNIT 4: Complex Urban Ecosystems
Lesson 1 - Drivers & Forces, Presses & Pulses
Lesson 2 - Different Drivers & Forces in Cities and Hummingbird Data Collection #1
Lesson 3 - Hummingbird Data Collection #2
Lesson 4 - Project Development Time

UNIT 5: Microhabitats and Community Relationships
Lesson 1 - Microhabitats Field Experience
Lesson 2 - Hummingbird Data Collection #3
Lesson 3 - Data Analysis
Lesson 4 - Project Development Time

UNIT 6: Action in Urban Ecology
Lesson 1 - Finalize and Film Public Service Announcement (PSA)
Lesson 2 - Video Editing and Presentation of PSA, Administer Post Assessment

Module 1
Introduction to Urban Ecology

6 units
Total 22 lessons
(approximately 90 -100 minutes per lesson)
Total Approximate Time (40 hours)
# MODULE 1 – DESIRED RESULTS, GRADES 4-8

**Understanding by Design: Stage 1**

<tr>
<td><strong>Systems and Interactions</strong></td>
<td>Students will understand the concept and attributes of urban ecology:</td>
<td>Students will understand the concept and attributes of urban ecology:</td>
<td>Students will understand the concept and attributes of urban ecology:</td>
</tr>
<tr>
<td>- Systems consist of parts that work together</td>
<td>a. Students will recognize connections and understand interactions between natural systems and human systems in an urban environment.</td>
<td>a. Students will understand how natural systems and human systems interact with each other in urban settings and the immediate and/or long-term consequences of such interactions.</td>
<td>a. Students will understand how natural systems and human systems interact with each other in urban settings and the immediate and/or long-term consequences of such interactions.</td>
</tr>
<tr>
<td>- Systems are part of the natural environment or constructed by humans</td>
<td>b. Students will understand how these interactions impact our ecosystems immediately and/or over time.</td>
<td>Students will understand essential concepts of urban ecology:</td>
<td>Students will understand essential concepts of urban ecology:</td>
</tr>
<tr>
<td>- Systems impact, interact and interrelate with each other</td>
<td><strong>GUIDING QUESTIONS</strong></td>
<td>a. Students will understand how natural systems and human systems possess specific structures in order to function in urban settings and the changes in the structures result in either positive, neutral or negative consequences.</td>
<td>a. Students will understand how natural systems and human systems can interact in conflicting ways in urban settings, and it may result in negative consequences (human impact).</td>
</tr>
</tbody>
</table>

- What is a city?
- What is a system?
- What makes up an ecosystem?
- How do natural and human systems interact with each other in cities?
- What can we do to create healthy and sustainable ecosystems where we live?

- "What is a system?"
- "In what ways human and natural systems interact with each other in cities?"
- "How can we develop healthy and sustainable cities?"

- What is a system?
- "What are the structural features of human and natural systems in urban settings?"
- "How do these structures support human and natural systems to function efficiently?"
- "What will occur when the structures of natural and human systems change?"
- "How do physiological/genetic structures of hummingbirds assist their survival in urban settings?"
- "How can we develop healthy and sustainable cities?"

- "What is a system?"
- "In what ways can natural systems come in conflict with one another in urban settings?"
- "In what ways can human systems negatively impact natural systems in urban settings?"
- "How can we reduce negative human impact in an urban ecosystem?"
- "How can we develop healthy and sustainable cities?"

</table>
The Urban Ecology Curriculum for English Learners presents an opportunity to deliver cross-disciplinary instruction and thus has been aligned to the following content area standards in grades 4-8:

- Common Core State Standards, English Language Arts (2010)
- California English Language Development Standards (2012)
- California Science Standards (1999)
- Next Generation Science Standards - California (2013)

The Project Curriculum Committee examined grade level content as well as cross-grade level articulation to identify standards that are targeted in this curriculum. Throughout the units you can determine which standards are “essential standards” for your classroom context. “Essential standards” are defined as those covered in-depth. You may also target “complementary standards”, defined as standards that may have been covered prior to this module, or that may be presented during the module at an introductory level.

A complete list of standards organized by grade level can be found in the “Grade Level Standards” Tab.
MODULE 1 – ASSESSMENT EVIDENCE
Understanding by Design, Stage 2 and Project Based Learning

Stage 2: How will student be assessed on content knowledge, language use, and literacy application? What project-based outcome will be expected? How will it be measured?

PROJECT DESCRIPTION

<table>
<thead>
<tr>
<th>Name of Project</th>
<th>Increase or sustain the Hummingbird Population in Our Neighborhood!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode</td>
<td>Public Service Announcement – Students will organize ideas of their chosen topic into data, mapping, and recommendations that presents the problem and gives a solution through a persuasive media (PSA).</td>
</tr>
<tr>
<td>Project Idea</td>
<td>Students work in teams to solve the existing problem of the hummingbird population in their neighborhood. They design effective research questions and conduct data collection based on their observation of hummingbirds and evaluation of the selected field site. Students apply knowledge of “healthy and sustainable city” where an urban ecosystem provides what is required for all organisms to live as the result of positive interactions among human and natural systems. They will create public service announcements (PSAs) with a PowerPoint/iMovie or other technological tool that demonstrates their understanding of urban ecology and how they could apply it to communicate the necessary elements to provide hummingbirds with a habitat that will allow them to thrive in the students' neighborhood.</td>
</tr>
<tr>
<td>Driving Question</td>
<td>“How can we build a healthy and sustainable city for hummingbirds and humans?”</td>
</tr>
<tr>
<td>Standards</td>
<td>Project will be assessed using the rubric. See below.</td>
</tr>
<tr>
<td>Audience</td>
<td>Public Service Announcements will be presented to the class, school, and community.</td>
</tr>

2 Developed based on California Department of Education ELD Standards, Expanding Level Standards (2012)

3 Developed based on Urban EcoLab Curriculum cures.lmu.edu/for-instructors/urban-ecolab-curriculum
MODULE 1 – LEARNING PLAN
Understanding by Design, Stage 3

Learning plans are provided for each unit. They include the following:

I. Lesson Outcome

II. Standards Connection and Integrated Content and Language Objectives

III. Key Dimensions of Academic Language

IV. Materials and Resources

V. Urban Ecology Instructional Sequence (Introduction, Input, Application/Inquiry, Closure/Reflection) with Support for English Learners:
   a. Language Development Routines (Focus on Language Modes and Scaffolding Strategies)
   b. Vocabulary Development Routines
   c. Content Area Reading/Writing
   d. Metacognitive/Metalinguistic Connection(s)

VI. Handouts/Resource Support Materials
