

# Opportunities for Research within the Data Science Education Community

# Welcome, Introduce Yourself

In the chat, please introduce yourself with your **name, role, and institution**, and your response to the question:

- What do you find most interesting/inspiring/challenging about data science education research?

# The Facilitation Team

Chad Dorsey  
Concord Consortium

Kate Miller  
Concord Consortium

Ryan Seth Jones  
Middle Tennessee State

David Weintrop  
University of Maryland

Kirsten Daehler  
WestEd

 Leticia Perez  
WestEd

Josh Rosenberg  
University of Tennessee

Nick Horton  
Amherst College

Jo Louie  
EDC

# State of the Field of Data Science Education Research at the K-12 Level

“Data science is in its infancy, and there is an opportunity to shape it in a way that will best serve students and future citizens. Given this early stage, there is a need to think deeply and creatively about how data science looks within K-12 and how it might develop ...”

- Report from the *Foundation of Data Science for Students in Grades K-12* Workshop

# Statement of Task

- What outcomes matter most for learners?
- What competencies make up data fluency?
- How can these data fluency competencies be measured?

Goals and Outcomes

Tools and Instruction

- What kinds of learning experiences might help bring about these data fluency competencies?
- What tools and data sets are needed to support young learners in acquiring data understanding and skills?
- How can K-12 data science education be designed to specifically reach students who have been traditionally marginalized and/or underrepresented in STEM?

- How can data science be meaningfully integrated with K-12 education, in both STEM and non-STEM classes?
- How well prepared is the current teacher workforce for teaching data science-related content in K-12 settings? What strategies could be used to enhance teachers' expertise related to data science?

Integrating Data Science in K-12 System

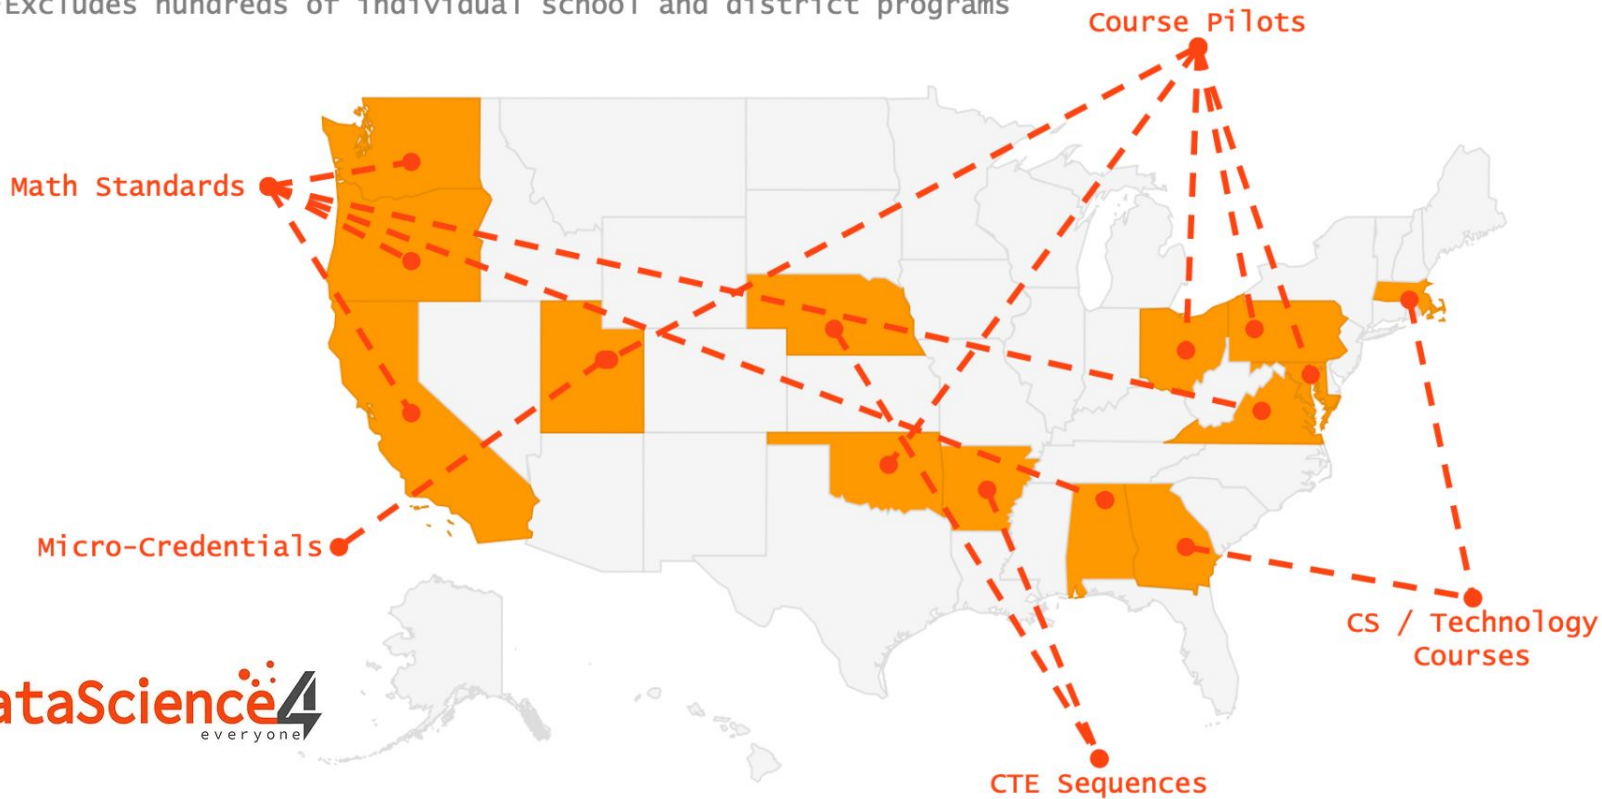

Evidence and Future Directions

- What bodies of research can be leveraged to gain insight on the development of data fluency and how best to support students?
- What are the critical gaps in the current knowledge base?
- What are the highest priority next steps for research and practice?

# Data science is growing across the country:

State-wide data science education programs (Summer 2022)

\*Excludes hundreds of individual school and district programs

# NATIONAL ACADEMIES

*Sciences  
Engineering  
Medicine*

- Four commissioned papers
- Notes and highlights from the workshop
- Examples and cases submitted by the community
- Available for free download

[Download the National Academies Report](#)

# Breakout Rooms

Choose your own adventure

[NOTES](#)

- Defining DSE Within and Across Disciplines
- Supporting Teachers for Teaching DSE
- Diversity, Equity, and Inclusion in DSE
- Tools and Tool Design for DSE

# Discussion

1. What are some highlights / takeaways from your discussion?
2. What about your breakout room was especially useful?

# Resources for DSE Research

# Conferences (1 of 2)

## American Educational Research Association (AERA)

- Pros: Diverse attendees, multiple divisions and Special Interest Groups (SIGs) with interest, NEW SIG for Data Science Education Soon!
- Cons: Large and vast, No centralized community for data science education

## International Society of the Learning Sciences (ISLS)

- Pros: Smaller and more focused, strong theoretical foundation, history of interdisciplinary work across math and science (and recently more disciplines)
- Cons: Sometimes difficult to get to since locations move across different countries

## Statistics Education Conferences (USCOTS, ICOTS, JSM, etc.)

- Pros: Strong emphasis on statistics as a discipline, established community dedicated to teaching and learning of data, statistics, and modeling
- Cons: Largely high school and undergraduate focus, less focus on knowledge about learners, most research is framed and conducted within a statistics or mathematics classroom

## Mathematics Education Conferences (PME-NA, NCTM, ICME, etc.)

- Pros: Sessions and interest groups on data and statistics, often strong connections to statistics education communities, strong mathematical focus, often confused on learner thinking
- Cons: Frames DSE as a mathematics activity and places emphasis on mathematical thinking

# Conferences (2 of 2)

- **Science Education Conferences (NARST, NSTA, TSTA, etc.)**
  - Pros: Data are used in scientifically meaningful contexts to generate claims, DSE is integrated into diverse forms of inquiry, DSE is connected to other scientific practices
  - Cons: Less emphasis on learning about data and the statistical reasoning necessary for certain types of inquiry and modeling
- **Computer Science Education Conferences (SIGCSE, ICER, RESPECT, CSTA, etc.)**
  - Pros: Venues with expertise on programming and computational aspects of data science
  - Cons: Data science will only be a small sliver of the overall program
- **Human-Computer Interaction Conferences (IDC, CHI, VL/HCC, etc.)**
  - Pros: a community of people who can (and are) building tools to make data science accessible/intuitive
  - Cons: often don't know much about learning or education

# Journals (1 of 2)

- **Journal of Statistics and Data Science Education**
  - An open access peer-reviewed journal published by the American Statistical Association (no APC)
  - It disseminates accessible knowledge for the improvement of data science and statistics education at all levels
- **Journal of the Learning Sciences (JLS)**
  - One of the two official journals of the International Society of the Learning Sciences
  - It provides a multidisciplinary forum for research on education and learning that informs theories of how people learn and the design of learning environments.
- **Statistics Education Research Journal**
  - Journal of the International Association of Statistics Education with research on teaching, learning, and understanding of statistics and probability.
- **British Journal of Educational Technology**
  - Journal of The British Educational Research Association
  - It publishes research that demonstrate how applications of instructional/educational technology systems, tools and resources lead to improvements in education

# Journals (2 of 2)

- **The American Statistician**
  - Publishes articles on statistics, statistical practice, statistics teaching (Teachers Corner), and statistical computing and graphics.
- **Harvard Data Science Review**
  - An new open-access venue (no APC) aspiring to be “a global forum on everything data science and data science for everyone”
- **Mathematics Education Journals (JRME, JMB, MTL, ZDM, etc.)**
  - Mathematics education journals often have research on data science education within a mathematics class context.

**Data Science Education is not a closed community, and most of us come to it from other disciplinary backgrounds. We want you to join and see yourself as a contributor!**

# DSE Research Community of Practice Database

[Database](#)

[Contact Edits Form](#)

[Publication Edits Form](#)

If you have any inquiries, please reach out to Kate Miller at [kmiller@concord.org](mailto:kmiller@concord.org)

The Concord Consortium has created a public database with the support of the Valhalla Foundation to foster a community of practice centered on data science education at the K-12 level. The purpose of this database is to facilitate an understanding of the community and the sharing and viewing of literature related to the field among community members.

The DSE CoP base offers several key features, including a public gallery view of contacts, a downloadable CSV file of contacts in a grid view, a grid view of publications available for download in CSV format, and links to forms for revising or adding to the dataset.

Please use the links to the left to access the main database and the forms for edit requests

# Funding & Grant Opportunities

- Innovative Technology Experiences for Students and Teachers (ITEST)
  - Focused on equitable and inclusive integration of technology into STEM instruction
  - Emphasis on **preparation for future workforce**, inclusion of **underrepresented and/or underserved** groups, and leveraging strategic and **community partnerships**
  - Projects can occur in **formal or informal settings**
  - **Mid-August** deadline, three project types, awards from **\$500K to \$3.5M**
- EDU Core Research (CORE)
  - Focused on **fundamental research** into general, underlying explanatory knowledge
  - Accepts projects in three areas: STEM Learning and Learning Environments, Broadening Participation in STEM, and STEM Workforce Development
  - Projects can occur in **formal or informal settings**
  - **Early-October** deadline, three proposal levels, awards from **\$500K to \$2.5M**

# Funding & Grant Opportunities

- **Discovery Research PreK-12 (DRK12)**
  - Focused on **research and development** for STEM teaching and learning
  - Projects occur or focus on **formal PreK-12 settings**
  - Accepts projects in two strands: **Learning and Teaching**
  - **Early-October** deadline, three proposal levels, awards from **\$450K to \$5M**
  - Also a new **Partnership Development** project type—\$100K for one year
- **Advancing Informal STEM Learning (AISL)**
  - Focused on **design, development and impact** of STEM learning opportunities and experiences **for the public**
  - Projects occur in **informal education settings**
  - Accepts projects for **Partnership Development and Planning, Integrating Research and Practice, and Research in Support of Wide-reaching Public Engagement with STEM**
  - **Early-January** deadline, awards from **\$50K to \$3.5M**

# Funding & Grant Opportunities

- **Research on Emerging Technologies for Teaching and Learning (RETTL)**
  - Focused on exploratory and synergistic research in emerging technologies
  - Emphasis on **learning, teaching, or a combination of both**
  - Broad scope: projects can occur in **formal or informal settings** and may; **not required to focus on STEM-related teaching and learning**
  - **Fall** deadline (new solicitation coming?), past awards up to **\$850K**
- **Improving Undergraduate STEM Education (IUSE)**
  - Focused on improving STEM teaching and learning for **undergraduate students**
  - Also interested in **transforming institutions** to adopt successful STEM education practices
  - Accepts projects in two tracks: **Engaged Student Learning** and **Institutional and Community Transformation**
  - Projects occur in **formal undergraduate settings**
  - **Mid-July and mid-January** deadlines, two/three levels, awards from **\$200K to \$2M**
  - Also includes **Capacity-Building awards** to enable institutions new as primary to Institutional and Community Transformation to identify a project of interest

# Curriculum and Tools – Collection (start here)

## Data Science for Everyone (DS4E) Resource Center “Teaching Data Science” ([link](#))

Great site with resources that are searchable by grade level and category (e.g., Course Curriculum, Lesson Plans, Tools & Software, Professional Development). The Resource Center also identifies places to look for educator-friendly datasets and opportunities for learning data science.

ABOUT | TAKE ACTION | IMPLE

Teaching Data Science

# Curriculum and Tools – Math focused

## CourseKata Statistics & Data Science ([link](#))

An interactive online textbook for teaching introductory statistics and data science in colleges, universities, and high schools, that includes more than 1500 formative assessment questions.

**Passion Driven Statistics** ([link](#)) – statistics and data science problem based learning ( PBL) course

**PASSION-DRIVEN STATISTICS**

## Skew the Script ([link](#))

Free, relevant, and data-rich math lessons specifically for AP Statistics and Algebra I/II learners that situate in relevant contexts. The lessons challenge students to tackle relevant questions (e.g., Is college worth the price?) with statistics, mathematics, and critical thinking.

# Curriculum and Tools – Science-focused

## Cosmic Data Stories ([link](#))

Engaging, interactive data stories, that allow learners to interrogate the data behind the story on their own, using data science and visualization techniques.

## MY NASA DATA ([link](#))

Lesson plans, mini lessons, data visualizations, and story maps that integrate Earth System Science data associated with the atmosphere, biosphere, cryosphere, geosphere, and hydrosphere.

## SERC Earth Exploration Toolbook ([link](#))

A collection of online Earth system science activities from the Science Education Research Center (SERC) at Carleton College. Each activity, or chapter, introduces one or more scientific data sets and analysis tools that enables users to explore some aspect of the Earth system.

# Curriculum and Tools – Other

**Anaconda** ([link](#)) – a community platform with educational tools and support for everything Python

**Census Academy** ([link](#)) – how to use the "American Community Survey: A Comprehensive Look"

**Data4Kids: data stories – Urban Institute** ([link](#)) – a set of tools and resources to help teach kids in primary and secondary school about data, data science, and data visualization in a virtual environment

**Makeover Monday** ([link](#)) – a community that comes together every Monday to work with a given data set and create better, more effective visualizations and help us make information more accessible

**Power of Data Science PBL modules** ([link](#)) – modules that provide opportunities for project-based learning around key ideas of data science in the context of relevant, real-world explorations and experiences

**Slow Reveal Graphs** ([link](#)) – an instructional routine that promotes sensemaking about data

**SERC Using Data in the Classroom** ([link](#)) – information for educators and resource developers interested in effective teaching methods and pedagogical approaches for using data in the classroom

**Statistics and Data Science for Teachers** ([link](#)) – this book empower teachers and teacher educators to teach statistics and data science in a way that is rich and relevant

**USS-DATA** ([link](#)) – modules designed to promote high school students' statistical thinking and data literacy skills through investigations of social and economic conditions in the U.S.

# Tools

**CODAP Story Builder** ([link](#)) – allows students to record and replay steps of their data analysis. It also allows for integration of text, images, videos, news stories, and other multimedia resources

**Glue** ([link](#)) – an open-source Python library to explore relationships within and between related datasets

**Fathom** ([link](#)) – dynamic software for teaching data analysis

**FieldScope** ([link](#)) – map-based data collection and analysis platform that supports community and citizen science

**Integrated Statistics Learning Environment** ([link](#)) – browser-based interactive statistics & data analysis platform

**TinkerPlots** ([link](#)) – a data visualization and modeling tool developed for use by middle school through university students

**Zooniverse** ([link](#)) – a platform for people-powered research
