

Fishbone and Driver Diagrams

Fishbone and Driver Diagrams

Fishbone – visually represent the analysis of a problem

- gaps we have identified in the continuum of preparing and sustaining effective science teacher preparation

Driver Diagrams – develops a working theory of practice improvement (an actionable plan)

- organizing possible change ideas suggested by systemic view of the problem represented by the Fishbone Diagram

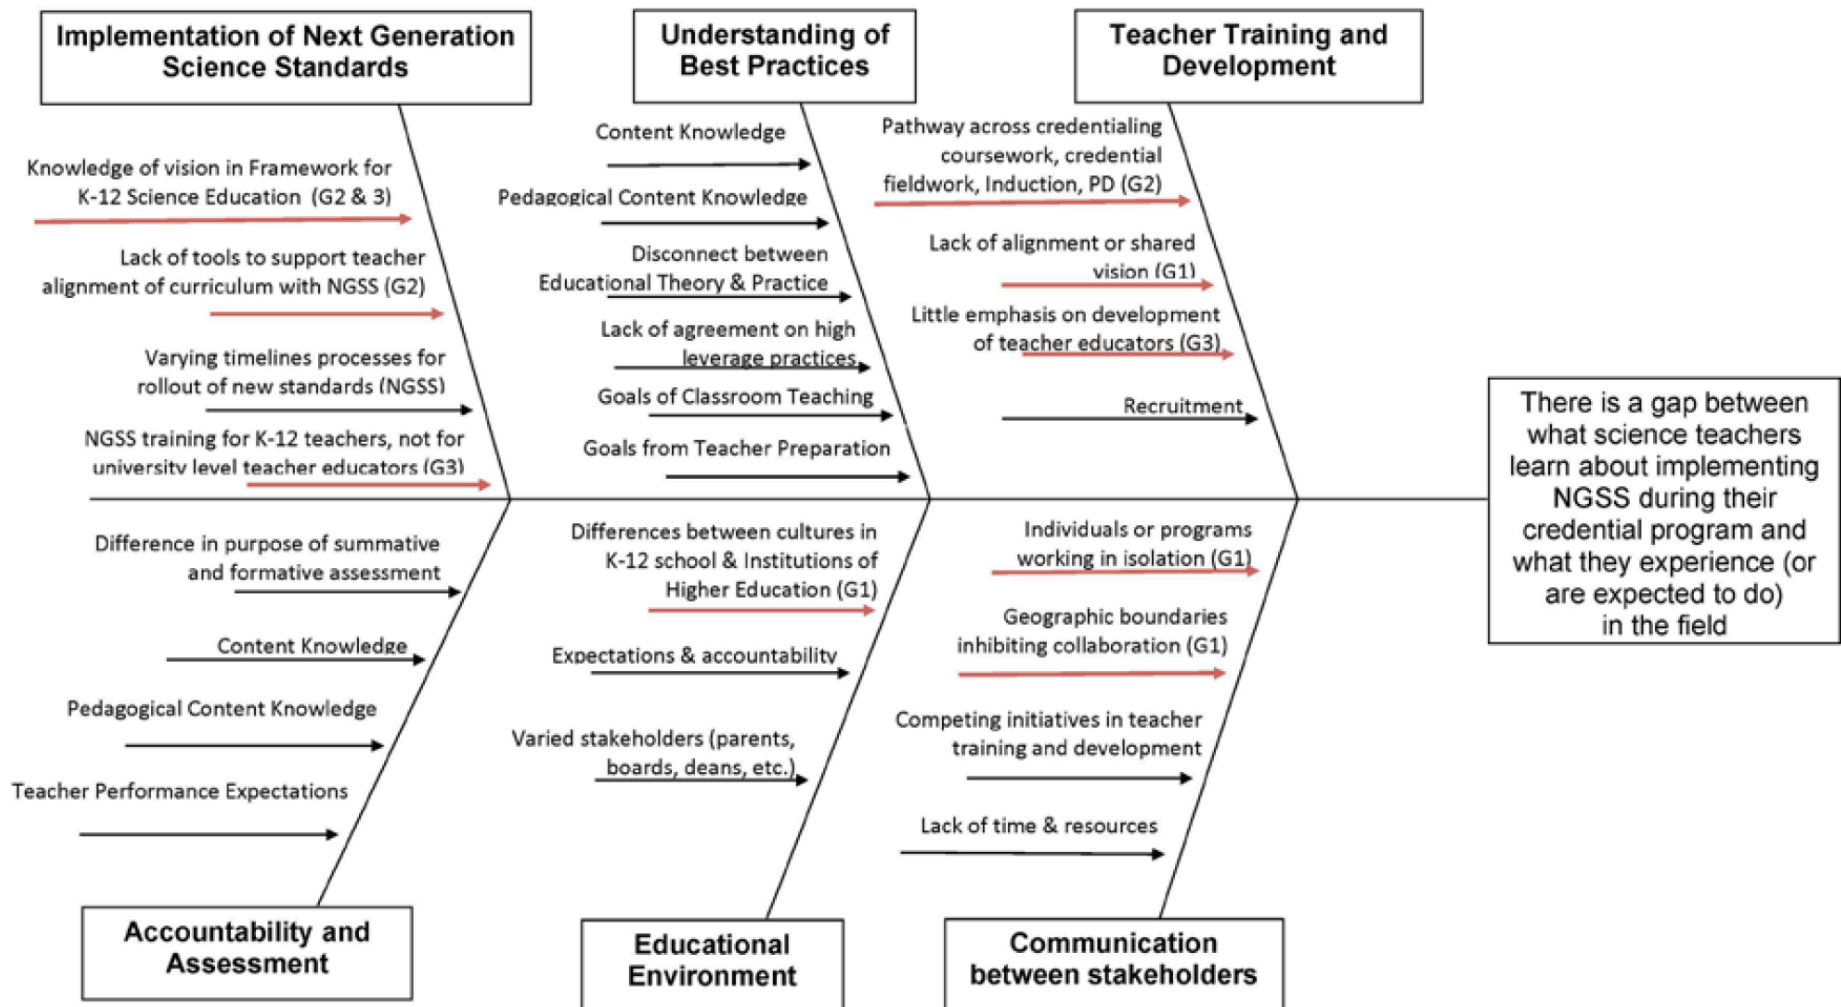

Created for

- Project Level (overarching)
- Pathway Steps (specific)

Fishbone Diagram

Figure 2. The fishbone diagram identifies factors contributing to an overarching problem (the head of the “fish”). Red arrows on the “bones” indicate areas for focus aligned to project goals.

Driver Diagram

Describes the mechanisms that support change ideas with the ultimate goal of impacting the improvement target
